

## Malware DeepView™

Malware DeepView is a next generation dynamic malware analyzer that uses patented and proprietary technology to find advanced malware that hides from other tools. We automatically force code execution, identify malicious code sequences, and detect malicious program behavior that consistently evades competitive technology.

### Deep

**Deep Code Inspection** finds not only OS Level indicators that others see, but also proprietary Program Level Indicators that distinguish code structure in malware and goodware.

### Forced

**Forced Code Execution** uses our patented technology to dynamically force the execution of all code paths, including code that is evading all other malware detectors.

### Detection

**Automatic Sequence Detection** uses deep machine learning to automatically identify program code patterns that are more frequently found in malicious programs.

### Deep Learning

We combine deep learning used in our Automatic Sequence Detection with a second machine learning engine to determine if a given sample is malicious or benign. This yields very high malware detection rates with low false positives.

***DeepView™ executes over 50% more program code that evades other analysis techniques and finds 50% more Indicators of Compromise (IOCs).***

# Malware DeepView™

## Key Features

- Cloud-based SaaS Solution
- Free, Basic, & Enterprise Licenses
- Comprehensive Analysis
  - Real network traffic
  - Yara & Suricata rules
  - Detailed Process Graphs
- Easy to use API for integration into malware analysis workflows
- Score & Report (available in JSON & HTML)

## File Types

Windows Executables (32 & 64 bit)	HTML & URLs
Windows DLLs	Archives (.zip, .rar, .7z, .iso, .tar, .gz, .bz2)
.NET Executables	Flash
PDF	JAR
MS Word, Powerpoint, Excel	Image File Types (Bitmap, GIF, JPEG)
MacOS DMG and Mach-O (32 & 64 bit)	Linux executables (32 & 64 bit)

## Use Cases

- Security Product Companies
- Software Product Companies
- Managed Security Service Providers
- Security Operations Centers
- Security Consultants & Incident Responders
- Malware Analysts
